

Rapid Rescue

Theme: E Ambulance

FACULTY :	Mudassir Arif	
BATCH :	2310d01	
PROJECT :	RAPID RESCUE <THEME E ABULANCE >	
S. NO.	ENROLLMENT NO.	STUDENT NAME.
1.	• 1522515	Ubaidullah rani
2.	• 1526613	Mustafa Rangoonia
3.	• 1521303	Saad Suleman
4.	• 1512128	Abdul Samad
5.	• 1524137	Shaheer Abbas

1. Acknowledgment:

The first, we would like to express my special thanks of gratitude to my teacher MISS TEZEEN ANIS who helped a lot in finalizing this project within the limited time frame, valuable counseling and assistance for the accomplishment of this project.

Secondly, we would also like to thanks the TECHWIZ team at Aptech Head Office, who gave as the opportunity to do this interesting and wonderful project about RAPID RESCUE

Thirdly, we also thank the e-project team for giving this task to us. Following are the benefits of this Project:

- Re-enforcement of skills happens in the experimental learning process.*
- A mentor, ensuring that we do not get drifted, constantly guide us.*
- It gives us a lot of confidence to face an interview as we have worked on a project. We can explain virtually everything on the subject we have learnt.*
- And finally, we would like to offer thanks to all my colleagues for their valuable suggestion.*

THANK YOU.

2. synopsis

Rapid rescue synopses (E ambulance):

"Rapid Rescue E Ambulance" is a high-stakes medical drama series that follows an elite team of paramedics and emergency responders in a bustling urban environment. Each episode focuses on their intense, life-or-death missions, highlighting both the technical challenges of emergency medical services and the personal stories of the crew members.

1. Appointment Scheduling:

The team faces various emergencies, from car accidents to medical crises, all while navigating their own emotional struggles and the dynamics of their relationships. The series emphasizes the importance of teamwork, quick thinking, and the human connection in the face of tragedy, showcasing the impact of their work on the patients and the responders alike.

Staff management:

"Rapid Action Staff Management" refers to a strategic approach in managing teams effectively in high-pressure environments. Key elements include:

1.Clear Communication: Establish open lines of communication to ensure that all team members are informed and can share updates quickly.

2.Rapid Decision-Making: Empower leaders to make quick decisions based on real-time data to respond to changing situations.

3.Flexibility: Encourage adaptability in roles and responsibilities to meet immediate needs and challenges.

4.Training and Development: Regular training to equip staff with skills necessary for fast-paced scenarios.

5.Team Cohesion: Foster a collaborative environment where team members support one another, enhancing overall performance.

6.Performance Monitoring: Implement real-time tracking of staff performance and outcomes to identify areas for improvement.

7.Feedback Mechanisms: Create systems for ongoing feedback to continuously refine processes and boost morale.

This approach helps organizations maintain efficiency and effectiveness, particularly in crisis situations or fast-moving industries.

3.PROJECT ANALYSIS:

1. Project Overview:

The Rapid Rescue E project aims to enhance emergency medical services through the deployment of advanced ambulance technology and rapid response strategies. The goal is to improve patient outcomes, reduce response times, and optimize resource management.

2. Objectives:

1. Improve Response Times: Utilize technology to decrease the time taken to reach patients.

2. Enhance Medical Care: Equip ambulances with advanced medical equipment and telemedicine capabilities.

3. Optimize Resource Allocation: Use data analytics to effectively deploy resources based on demand patterns.

3. Key Components:

1. Technology Integration:

- GPS and routing software for optimal navigation.
- Telehealth systems for real-time medical consultation during transit.

- Advanced medical devices for better on-site patient care.

2. Staff Training:

- Regular training sessions on new technology and emergency protocols.
- Simulation exercises to improve team coordination.

3.Data Analytics:

- Implementing data systems to analyze response times, patient outcomes, and resource utilization.
- Predictive analytics for forecasting demand in different areas.

4.Community Engagement:

- Educational programs to raise awareness about emergency services.
- Feedback loops from the community to improve service delivery.

4.Challenges:

1. Funding: Securing sufficient financial resources for technology and training.

2.Integration: Ensuring seamless integration of new systems with existing workflows.

3.Resistance to Change: Overcoming reluctance from staff accustomed to traditional methods.

5.Expected Outcomes

- Reduced average response time by 20%.
- Increased patient satisfaction through improved care during transport.
- Enhanced operational efficiency and reduced costs through data-driven resource management.

6.Conclusion:

The Rapid Rescue E project represents a transformative approach to emergency medical services, leveraging technology and data analytics to improve outcomes and efficiency. Continued assessment and adaptation will be key to its success.

5.PROBLEM STATEMENT:

In emergency medical situations, timely access to healthcare can mean the difference between life and death. Traditional ambulance services often face challenges such as traffic congestion, inefficient routing, and delays in reaching patients. The Rapid Rescue E-Ambulance system aims to address these issues by utilizing advanced technology and innovative strategies to ensure rapid response times and effective patient care.

1.Key Challenges:

1. Traffic Congestion: Urban environments often experience heavy traffic, leading to delays in emergency response.

2.Inefficient Routing*: Current routing systems may not optimize travel time due to outdated mapping technologies.

3.Accessibility: Certain areas, especially rural or underserved locations, may lack timely access to emergency services.

4.Communication Gaps: Delays in communication between dispatch and emergency personnel can hinder response effectiveness.

5. *Resource Allocation*: Inefficient use of available ambulances can lead to longer wait times for patients in critical need.

2. Objectives:

1.Reduce Response Times: Develop a system that ensures ambulances reach patients within the critical golden hour.

2.Optimize Routes: Implement real-time traffic data and predictive analytics to identify the fastest routes.

3.Enhance Accessibility: Utilize drones or other technologies to reach remote or hard-to-access areas quickly.

4.Streamline Communication: Create an integrated communication platform that allows for real-time updates between dispatch and ambulances.

5.Improve Resource Management: Use data analytics to predict demand and allocate resources more effectively.

3.Conclusion:

The Rapid Rescue E-Ambulance system seeks to revolutionize emergency medical response by addressing these critical challenges, ultimately saving lives through faster and more efficient service delivery.

4. Project Requirements:

1. System Architecture

- **Cloud-Based Platform:** For data storage and processing, ensuring scalability and real-time access.
- **Mobile Applications:** For dispatchers, paramedics, and patients to track ambulance locations and communicate effectively.

2. Routing and Navigation:

- **Real-Time Traffic Data Integration:** Utilize APIs from traffic data providers to optimize routes.
- **GPS and Mapping:** Implement advanced GPS technology for accurate tracking and navigation.

3.Communication System:

- Two-Way Communication:** Ensure reliable communication between dispatch and ambulance teams.
- **Incident Reporting:** Enable paramedics to update patient conditions and treatment in real-time.

4.Data Analytics and Predictive Modeling:

- ***Demand Forecasting*:** Analyze historical data to predict peak demand times and locations.
- **Performance Metrics:** Track key performance indicators (KPIs) such as response times and patient outcomes.

5.User Interfaces

- **Dispatcher Dashboard:** For real-time monitoring of all ambulances, incidents, and patient statuses.
- ***Paramedic Interface*:** Easy-to-use app for navigation, communication, and patient data input.

6. Integration with Healthcare Systems

- **EHR Compatibility:** Ensure integration with electronic health record (EHR) systems for seamless patient information transfer.

- **Hospital Notification:** Automatic alerts to hospitals about incoming patients for better preparedness.

7. Vehicle and Equipment Requirements:

- ***Equipped E-Ambulances*:** Vehicles outfitted with essential medical equipment, communication devices, and GPS.

- **Drones (if applicable):** For quick delivery of medical supplies to hard-to-reach areas.

8.Regulatory Compliance:

- Health Regulations:** Ensure adherence to local and national regulations for emergency medical services.

- **Data Privacy:** Implement measures to comply with data protection laws (e.g., HIPAA).

9. Training and Support:

- **Staff Training Programs:** Provide comprehensive training for paramedics and dispatchers on new technologies and protocols.

- **Technical Support:** Establish a support system for troubleshooting and maintenance of the technology.

10. Testing and Evaluation:

- **Pilot Program:** Launch a pilot phase to test the system in real-world scenarios.

- **Feedback Mechanisms:** Gather feedback from users (paramedics, dispatchers, patients) for continuous improvement.

Conclusion:

The successful implementation of the Rapid Rescue E-Ambulance project requires a comprehensive approach that integrates technology, user experience, and regulatory compliance to enhance emergency medical response efficiency.

6. SCOPE OF THE WORK:

The Rapid Rescue website will serve as a comprehensive platform to enhance public awareness and access to emergency ambulance services. Key features will include detailed service information, real-time ambulance tracking, emergency contact options, educational resources, and user account management. The website will be designed for responsiveness across devices, ensuring compliance with data protection regulations, and will include SEO optimization to enhance visibility. The project will follow a structured timeline from research and development to launch, ultimately aiming to improve user engagement and emergency response efficiency.

JETSTREAM

Automatically scaffolds the login, two-factor login, registration, password reset, and email verification features for your project.

We apply Jetstream by the following step :

Step 1:

Database Name → ENV

The .env file is used in projects to store configuration settings, environment variables, and sensitive information securely. and we put **Database name, Password and Email address.**

Step 2:

Jetstream link:

Before we implement to the next step first we click in this link below

```
>> composer require Laravel / Jetstream<<
```

Step 3:

Run command livewire:

Then we run the command `<php artisan jetstream : install livewire>`

USES OF LIVEWIRE:

develop Blade components that offer a laravel of reactivity equal to that offered by vue or react without the need of manage.

Step 4:

Install npm:

Then install `< npm >` it is basically used for managing dependencies of various server side dependencies.

Step 5:

Run command npm:

In this step we run the npm command `< npm run build or npm run dev>` this command is used to create and optimized production build.

Step 6:

Setting in env:

In step 6 we setting env in our template env < Environment variables > in Node are used to store sensitive data such as password, API credentials, and other information that should not be written directly in code.

MAIL_USERNAME=fashimaster2208E@gmail.com

MAIL_PASSWORD=rqgntliycbzekgsp

MAIL_ENCRYPTION=tls

MAIL_FROM_ADDRESS=fashimaster2208E@gmail.com

MAIL_FROM_NAME=Food_zone

Step 7:

Config/fortify.php

**fortify = uncomment one line code
fortify trollers needed to implement all of Laravel's
authentication features**

step 8:

App/models/

user.php :-

Authenticatable implements MustVerifyEmail.

Step 9:

App/Providers/appserviceprovider.php

appserviceprovider work

Step 10:

Schema::defaultStringLength(200)

use Illuminate\Support\Facades\Schema;

Step 11:

**In the last we run the command
<PHP artisan migrate >**

scope of website:

HOME

1- Registration and login.

2- Introduction & information related to our latest ambulance.

TESTIMONIAL

1- Patient will be able to look up their own feedback after submitting the survey of getting chance to avail our best .

CONTACT

1- Patient will be able to reach out to us through filling the contact form.

2- Patient must have to put their email and name

ABOUT US

1- Info regarding our professional staff and their ethics.

2- Success of our work hard.

DRIVERS

1- Patients will be aware about the info regarding our hard working drivers.

2- Patients can be able to look

E AMBULANCE SERVICE

1- Our latest drivers with latest ambulance also our latest and best services.

Dashboard

There are 3 types of Dashboards:

Admin dashboard:

- **Driver record:** here admin can insert new drivers also can see all records of our available driver
 - **Feedback record:** here admin can see all the feedback received by users
 - **Contact record:** here admin can see all contacts and are able to delete as well
 - **User data:** here admin are able to see users data also are able to delete and edit the role to go to any other dashboard like user and driver.
 - **Booking record:** here admin can see their latest booking by users
- Search ambulance: admin can search the data by names also can directly go to user dashboard

- **Add blog:** here admin can add blog and articles also can view it

User Dashboard:

- **Insert feedback:** here user can easily fill the feedback by giving us a survey also can view their own feedbacks
- **Contact record:** user can easily see their own contact information
- **Search ambulance:** user can easily search their ambulance by searching their names

Driver Dashboard:

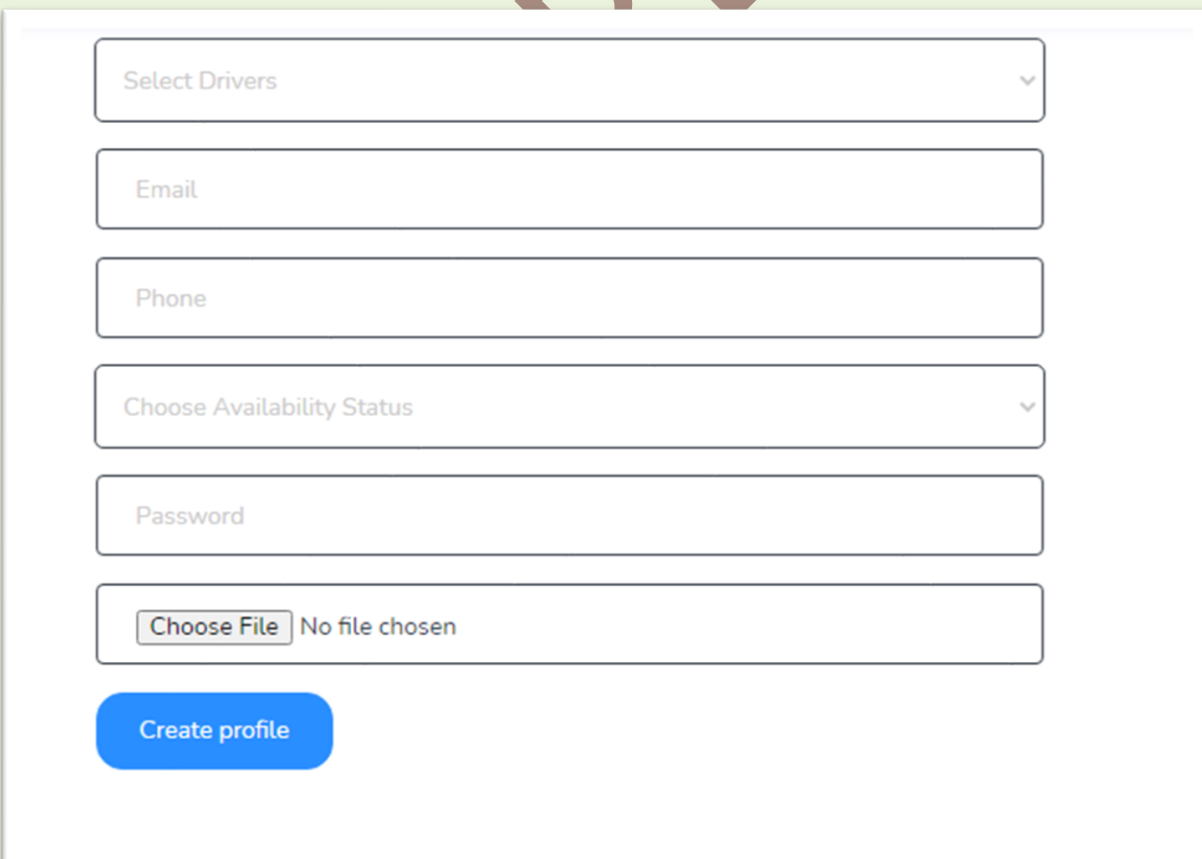

- **Feedback:** driver can see feedback given from users on their services
- **Contact :** driver can see all contacts

Admin dashboard:

Insert Drivers:

In this section Admin can easily add Drivers.

```
<div class="container">
  <form action="{{URL::TO('driversinserted')}}" method="POST" enctype="multipart/form-data">
    @csrf
    <select name="name" class="form-control mt-3 w-50 border-dark">

sitemap regarding dashboard:

Database Design:

The screenshot displays the MySQL Workbench interface with the 'salon_management23011' database selected. The 'Structure' tab is active, showing a list of tables and their columns. The tables are organized in a grid, with each table's details expanded to show its columns, data types, and constraints. The tables include:

- galleries
- sessions
- personal_access_tokens
- checkouts
- appointdates
- contacts
- stylists
- failed_jobs
- appointments
- password_reset_tokens
- products
- recproducts
- migrations
- checksins
- receptionists
- receptionsalaries
- feedback
- services

Each table's details are as follows:

- galleries**: id (bigint unsigned), Name (varchar(200)), Detail (varchar(200)), Profile (varchar(200)), created_at (timestamp), updated_at (timestamp).
- sessions**: id (bigint unsigned), user_id (bigint unsigned), ip_address (varchar(45)), user_agent (text), payload (longtext), last_activity (int), created_at (timestamp), updated_at (timestamp).
- personal_access_tokens**: id (bigint unsigned), tokenable_type (varchar(200)), tokenable_id (bigint unsigned), name (varchar(200)), token (varchar(64)), abilities (text), last_used_at (timestamp), expires_at (timestamp), created_at (timestamp), updated_at (timestamp).
- checkouts**: id (bigint unsigned), Details (varchar(200)), First_name (varchar(200)), Last_name (varchar(200)), City (varchar(200)), Country (varchar(200)), Category (varchar(200)), PostCode (varchar(200)), Email (varchar(200)), Phone (varchar(200)), created_at (timestamp), updated_at (timestamp).
- appointdates**: id (bigint unsigned), date (varchar(200)), time (varchar(200)), category (varchar(200)), created_at (timestamp), updated_at (timestamp).
- contacts**: id (bigint unsigned), Name (varchar(200)), Email (varchar(200)), Number (varchar(200)), Gender (varchar(200)), Message (varchar(200)), created_at (timestamp), updated_at (timestamp).
- stylists**: id (bigint unsigned), Name (varchar(200)), Email (varchar(200)), Password (varchar(200)), Time (varchar(200)), Shift (varchar(200)), Profile (varchar(200)), created_at (timestamp), updated_at (timestamp).
- failed_jobs**: id (bigint unsigned), uuid (varchar(200)), connection (text), queue (text), payload (longtext), exception (longtext), failed_at (timestamp).
- appointments**: id (bigint unsigned), First_name (varchar(200)), Last_name (varchar(200)), Email (varchar(200)), Phone (varchar(200)), Category (varchar(200)), Date (varchar(200)), Time (varchar(200)), Status (varchar(200)), created_at (timestamp), updated_at (timestamp).
- password_reset_tokens**: email (varchar(200)), token (varchar(200)), created_at (timestamp), updated_at (timestamp).
- products**: id (bigint unsigned), Name (varchar(200)), Quantity (varchar(200)), Price (varchar(200)), Type (varchar(200)), Details (varchar(200)), Image (varchar(200)), created_at (timestamp), updated_at (timestamp).
- recproducts**: id (bigint unsigned), Productid (varchar(200)), Name (varchar(200)), Quantity (varchar(200)), Price (varchar(200)), Type (varchar(200)), Details (varchar(200)), Image (varchar(200)), created_at (timestamp), updated_at (timestamp).
- migrations**: id (int unsigned), migration (varchar(200)), batch (int).
- checksins**: id (bigint unsigned), state (varchar(200)), first_name (varchar(200)), last_name (varchar(200)), city (varchar(200)), country (varchar(200)), category (varchar(200)), zipcode (varchar(200)), email (varchar(200)), phone (varchar(200)), Payment_method (varchar(200)), created_at (timestamp), updated_at (timestamp).
- receptionists**: id (bigint unsigned), Name (varchar(200)), Email (varchar(200)), Time (varchar(200)), Shift (varchar(200)), Password (varchar(200)), Profile (varchar(200)), created_at (timestamp), updated_at (timestamp).
- receptionsalaries**: id (bigint unsigned), Name (varchar(200)), Salary (varchar(200)), Date (varchar(200)), Account_No (varchar(200)), created_at (timestamp), updated_at (timestamp).
- feedback**: id (bigint unsigned), name (varchar(200)), email (varchar(200)), message (varchar(200)), rating (varchar(200)), created_at (timestamp), updated_at (timestamp).
- services**: id (bigint unsigned), service_name (varchar(200)), service_detail (varchar(200)), service_image (varchar(200)), created_at (timestamp), updated_at (timestamp).
